MongoDB Manual

5.0 (current) ▾

▸ Introduction

▾ Installation

▾ Install MongoDB
Community Edition

▸ Install on Linux

▸ Install on macOS

▸ Install on Windows

▸ Install MongoDB
Enterprise

▸ Upgrade MongoDB
Community to MongoDB
Enterprise

Procedure

Follow these steps to install MongoDB Community Edition using the MongoDB Installer wizard. The installation process installs both the MongoDB binaries as well as the default [configuration file](#) <install directory>\bin\mongod.cfg.

1 Download the installer.

Download the MongoDB Community `.msi` installer from the following link:

▸ [MongoDB Download Center](#) ↗

- In the **Version** dropdown, select the version of MongoDB to download.
- In the **Platform** dropdown, select **Windows**.
- In the **Package** dropdown, select **msi**.
- Click **Download**.

2 Run the MongoDB installer.

For example, from the Windows Explorer/File Explorer:

- Go to the directory where you downloaded the MongoDB installer (`.msi` file). By default, this is your `Downloads` directory.
- Double-click the `.msi` file.

MongoDB Community Server

The Community version of our distributed database offers a flexible document data model along with support for ad-hoc queries, secondary indexing, and real-time aggregations to provide powerful ways to access and analyze your data.

The database is also offered as a fully-managed service with [MongoDB Atlas](#). Get access to advanced functionality such as auto-scaling, serverless instances (in preview), full-text search, and data distribution across regions and clouds. Deploy in minutes on AWS, Google Cloud, and/or Azure, with no downloads necessary.

MongoDB Shell

MongoDB Shell is the quickest way to connect to (and work with) MongoDB. Easily query data, configure settings, and execute other actions with this modern, extensible command-line interface — replete with syntax highlighting, intelligent autocomplete, contextual help, and error messages.

Note: MongoDB Shell is an open source (Apache 2.0), standalone product developed separately from the MongoDB Server.

Only **msi** type of file need to be downloaded and change platform according to PC's

MongoDB Compass

Easily explore and manipulate your database with Compass, the GUI for MongoDB. Intuitive and flexible, Compass provides detailed schema visualizations, real-time performance metrics, sophisticated querying abilities, and much more.

Please note that MongoDB Compass comes in three versions: **a full version** with all features, **a read-only version** without write or delete capabilities, and **an isolated edition**, whose sole network connection is to the MongoDB instance.

For more information, see our [documentation pages](#).

- **Compass**

The full version of MongoDB Compass, with all features and capabilities.

- **Readonly Edition**

This version is limited strictly to read operations, with all write and delete capabilities removed.

- **Isolated Edition**

This version disables all network connections except the connection to the MongoDB instance.

GUVI > PROJECT 0

Security Quickstart

To access data stored in Atlas, you'll need to create users and set up network security controls. [Learn more about security setup](#)

- 1 How would you like to authenticate your connection?
Your first user will have permission to read and write any data in your project.

Username and Password

Certificate

Create a database user using a username and password. Users will be given the *read and write to any database privilege* by default. You can update these permissions and/or create additional users later. Ensure these credentials are different to your MongoDB Cloud username and password.

Username

Password 

 Autogenerate Secure Password  Copy

Create User_name and Password
and Click >> Create User
And Scroll Down

SECURITY

Quickstart

Database Access

Network Access

Advanced

2 Where would you like to connect from?

Enable access for any network(s) that need to read and write data to your cluster.

My Local Environment

Use this to add network IP addresses to the IP Access List. This can be modified at any time.

Cloud Environment

Use this to configure network access between Atlas and your cloud or on-premise environment. Specifically, set up IP Access Lists, Network Peering, and Private Endpoints.

Set your network security with any of the following options

Only an IP address you add to your Access List will be able to connect to your project's clusters.

IP Address	Description	
0.0.0.0/0	GUVI	Add Entry
		Add My Current IP Address

Add IP address as above or Add Current IP address by clicking >> **Add My IP Address**

And click Finish

Congratulations on setting up access rules!

You will now be able to connect to your deployments. You can continue to add and update access rules in [Database Access](#) and [Network Access](#).

☒ Hide Quickstart guide in the navigation. You can visit [Project Settings](#) to access it in the future.
